

Decarbonisation Ambitions

BMD is working towards a 20% reduction in Scope 1 and Scope 2 greenhouse gas emissions from 2024 levels by 2032.

We will achieve this through the following strategic initiatives:

20%

Carbon Reduction Ambition by 2032

Strategic procurement of renewable energy

100% of our electricity consumption will be supplied by 'green power' contracts that include purchase of equivalent amount of renewable energy certificates.

Transitioning to hybrid or electric vehicles

We will expand our hybrid and electrical vehicle options and enhance operational efficiencies to reduce light vehicle emissions from business travel by 50% compared to 2024 levels.

Utilisation of solar, solar hybrid, and battery energy storage systems

Where connection to the electricity grid is not available, we will invest in solar, solar hybrid, and battery energy storage systems to provide site power requirements.
